Summary

Backend developer focused on applied AI: APIs, integrations, RAG and agents. I take products from idea to production: an Android app published on Google Play with about 270 users, and custom software in daily use by a client. I work by directing AI agents, with specs, tests and a review of every change.

Experience

AI R&D Developer Intern, Equipceramic — Sept 2026 – present

- Sole member of a newly created AI R&D department, reporting to the IT director.
- Internal agents and RAG system on SQL Server 2025 with native vector search.
- Spring Boot API for LLM queries, with per-query logging (user, question, tokens) and a test suite.
- Agent for the sales department that operates on the company's ERP (in progress).

Full Stack Developer, Freelance — Feb 2026 – present

- Kitchen management software for a care home (Laravel, React, Inertia): menus, inventory and orders; in daily use since March 2026.
- Supplier orders sent via WhatsApp, PDF and Excel export, and configurable price visibility.
- Evolved into a product with a management dashboard (costs and budget) to offer to other care homes.

Projects

ForoPlus — Kotlin · Android

- Unofficial Android client for a forum with over a million users; on Google Play with about 270 users.
- Turns the forum's HTML into structured data; remotely configurable selectors, change alerts and deterministic selector repair (no LLM), with regression tests and CI.

cdp-mcp — Python · MCP

- MCP server (14 tools) that lets AI agents intercept and analyze HTTP/HTTPS traffic with mitmproxy.

Reelcipe — FastAPI · React Native

- Mobile app (in development, two-person team) that turns cooking reels into recipes; FastAPI backend with a typed OpenAPI contract.

CepAlert — Kotlin · Python

- Android app that predicts mushroom zones from weather and soil data, with a daily pipeline on GitHub Actions.

Skills

Backend & data: Python, FastAPI, Java, Spring Boot, PHP, Laravel, REST APIs, SQL (SQL Server, MySQL, SQLite)

Applied AI: LLMs, RAG, agents, MCP servers, vector search

Mobile & frontend: Kotlin (Android), TypeScript, React, React Native (Expo)

Tools: Git, GitHub Actions (CI/CD), pytest, Claude Code, Cloudflare Pages

Languages: Spanish and Catalan (native), English C1 (not certified)

Education

Institut Milà i Fontanals, Higher VET Diploma in Web App Development (DAW) — Completed 2026

Other experience

Several years in positions of responsibility and customer service (including reception), alongside my studies.
